SUBWAY CAVE

DID YOU KNOW...?

SUBWAY CAVE CAME INTO EXISTENCE NEARLY TWENTY THOUSAND YEARS AGO DURING VOLCANIC EVENTS.

SUBWAY CAVE

The cave is on the Northern border of Lassen National Park in the Lassen National Forest and is a key remnant of the volcanic past of Northern California.

This part of the state is a portion of the Cascade Range of mountains.

They were ancient volcanoes that gave shape to the geology of the region thousands of years ago and it continues even today.

Subway Cave

SUBWAY CAVE

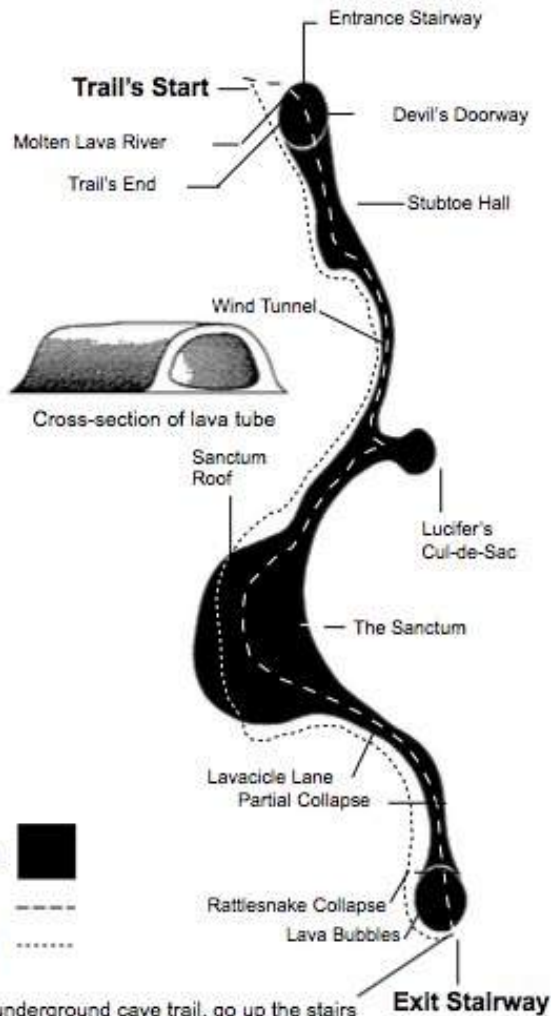

This is not that type of cave where you find lots of stalactites, stalagmites, or other dramatic rock formations, but it does have a few surprises.

There are maps and signs throughout the tube that points out the unique features. The most striking feature is the two mini volcanoes that appear on the floor midway through the tunnel and look like melted mud pies!

There are different textures and shades of brown and grey on the walls and ceilings of the cave.
